AT STANFORD

THE NEW STANFORD HOSPITAL

BUILDING FOR THE MEDICAL NEEDS OF THE COMMUNITY

Stanford Hospital & Clinics must rebuild in order to meet strict new seismic safety requirements established by Senate Bill 1953. In addition, Stanford Hospital needs larger, more modern facilities to meet capacity needs, accommodate new medical technologies and adopt the new hospital standard of single-patient rooms.

The new Stanford Hospital, which includes an expanded Emergency Department and 144 additional beds, will be designed by the internationally recognized firm Rafael Viñoly Architects (RVA) in association with Lee, Burkhardt, Liu, Inc. (LBL). Construction is projected to take five years, during which time Stanford Hospital will remain open and fully operational.

The new Stanford Hospital will feature individual patient rooms, an enlarged Level-1 trauma center and Emergency Department and new surgical, diagnostic and treatment rooms.

ABOUT THE RENEWAL PROJECT

The new Stanford Hospital is part of the Stanford University Medical Center Renewal Project, which also includes the expansion of Lucile Packard Children's Hospital and replacement of outdated School of Medicine facilities. The Medical Center must rebuild and modernize its facilities in order to continue serving the region's current and future healthcare needs and accommodate advances in technology and patient care.

For more information on the Stanford University Medical Center Renewal Project, please visit: stanfordpackard.org

Key Facts

- Proposed net increase of approximately 824,000 sq. ft.
- Additional 144 beds for a total of 600 patient beds
- New Emergency Department will be three times larger in size and feature state-of-the-art technology

Key Benefits

- Improved patient safety, privacy and comfort through individual patient rooms
- Enlarged Level-1 trauma center
- State-of-the-art surgical, diagnostic and treatment rooms

Design Highlights

- Flexible, pavilion design
- Light-filled corridors with central courtyard
- Accessible roof gardens for patients and visitors

THE NEW STANFORD HOSPITAL DESIGN

The new Stanford Hospital will create a healing environment to care for the whole person—addressing emotional, social and physical needs. The finest facilities and medical care anywhere will be available at your doorstep.

VIEW FROM PROMENADE

The new Stanford Hospital will provide a sustainable healing environment with modular pavilions to assure future flexibility for the rapid pace of change in medicine and technology.

LOBBY VIEW

A sloped courtyard with a prominent water feature will organize public circulation on the lower levels and bring natural light into the center of each floor.

COURTYARD VIEW

The central courtyard and roof gardens will help patients and visitors find their way from public areas to patient care units and other services.

GARDEN LEVEL TERRACE

Light-filled corridors with views to the foothills and beyond, gardens and outdoor courtyards will bring nature into the healing process and provide an uplifting atmosphere for everyone.
